Subject Index (Parts A and B)

- Acid deposition, meteorology
 - 55, 329
- Analysis of remotely sensed data
 - 55, 41
- Athens Lead Experiment 55, 275
- Benefit-cost analysis, of
 - environmental programs 56, 69
- Biogeochemical cycles 55, 243
- Bioindicators, of heavy metals
 - pollution 55, 339
- Biomap, biological mapping of
 - entire land surface of the earth from space 56, 247
- Chinese special economic zones,
 - development 55, 147
- Climate System Monitoring 56, 55
- Climate, The World Climate
 - Programme 55, 197
- Conservation of ancient
 - monuments 55, 365
- Contaminant mobility, from dred-
 - ging operations 56, 173
- Contingent valuation, validity
 - 56, 99
- Desertification, economic fac-
 - tors 55, 101
- Desertification, of semi-arid
 - zones 55, 91
- Development and environment
 - 56, 325
- Earth Observing System, scien-
 - tific problems 56, 3
- Economic principles, preserving
 - biological resources 56, 89
- Economics, energy and the
 - environment, scenario study 56, 301
- Energy and resource depletion,
 - and entropic degradation 56, 297
- Environmental economics 56, 155
- Environmental management 56, 309
- Environmental problems, iden-
 - tification and assessment 56, 339
- Environmental studies, in less-
 - developed countries 55, 165
- Eutrophication, main causes
 - 56, 201
- Eutrophication, modelling of
 - prediction of and recovery 55, 261
- Eutrophication, relationship to
 - primary production and nut-
rient availability 56, 211
- Eutrophication, the rôle of
 - phosphates 55, 229
- Fine-grained sediments, trans-
 - port 55, 219
- Flood control, use of space-
 - borne radar 56, 277
- Forests, space-borne remote sen-
 - sing of 56, 243

- Frontier environments, conditions for successful development 55, 111
- Global Environment Monitoring System 56, 19
- Greenhouse gases, climatic consequences 55, 177
- Hazardous waste management 56, 255
- Heavy metals transport, rôle of suspended matter and bottom sediments 55, 243
- Heavy metals, pollution from industry 55, 339
- Heavy metals, wet deposition 55, 311
- High sea levels, conditions associated with 55, 251
- Hydrocarbon content of sediments 56, 221
- Industrial wastes, site selection 56, 265
- Lake management, modelling prediction and recovery of lake eutrophication 55, 261
- Land use, factors affecting 56, 139
- Land-use practices, and desertification 55, 91
- Landscape conservation 55, 387
- Lead, fraction of blood-lead due to gasoline-lead 55, 275
- Less-developed countries, environmental development 55, 165
- Marine resource exploitation, tuna 56, 121
- Microbial mats, indicators of long-term stability and change 56, 379
- Model of society's total environment 55, 157
- Modeling environmental and resource planning techniques 55, 285
- Municipal wastewater, recycling of 56, 317
- Natural resource availability 55, 3
- Natural resource degradation 55, 129
- Natural resource management, economic models 55, 121
- Net primary production of terrestrial vegetation 56, 233
- Nitrous oxide, emission from soils 55, 27
- Nitrous oxide, increasing atmospheric concentration 55, 27
- Nuclear plants, management 55, 59
- Numerical water quality estimation for organic river pollution 55, 209
- Oil pollution detection, remote sensing 56, 287

Organic river pollution, water
quality estimation 55,
209

Organochlorine pesticides,
residues 55, 321

Pesticide contamination of
groundwater 56, 111

Phosphates, rôle in eutrop-
hication 55, 229

Pilot Data Systems 56, 45

Pilot Land Data System 56,
31

Recycling of municipal waste-
water 56, 317

Remote sensing, for global
studies of terrestrial
vegetation 55, 187

Remotely sensed data, analysis
55, 41

Risk assessment, uncertainty
56, 111

Risk reduction, willingness to
pay 56, 77

Sediments, hydrocarbon content
56, 221

Shuttle Imaging Radar Program,
for flood control 56, 277

Soil humic acids, complexation
55, 351

Solid waste management 56,
183

Technological opportunities
56, 347

Wet deposition of acid and heavy
metals 55, 311
